SHIELD YOUR DATA WITH OUR IMPENETRABLE FILE ENCRYPTION SOLUTIONS

If you ask most people whether they would leave a wallet full of cash on the street or the front door to their home wide open, you normally get a standard response: No. Well, you need to protect your data just as vigorously as you would your cash and your home. This is particularly true of sensitive corporate and client information as compliance laws can deliver hefty penalties in the case of data breaches.

File encryption acts as the virtual lock on the door, ensuring that no unauthorized users have access to your sensitive information. Xpert Technologies has added another step to further protect your data. Our xEncrypt solution keeps that information encrypted, even if the data gets out of your hands.

The data you keep, and the data entrusted to you by your clients, is the backbone of your company. Do not risk a corporate data breach by leaving your files unsecured. With our impenetrable file encryption solutions, it's easy to keep your information protected. Many businesses do not recover after a major data breach. Here's how to make sure that yours is not one of them.

File Encryption — The Benefits

Data security is a concern for most corporations. File encryption keeps client data safe, which helps you uphold your reputation. Breaches can be costly and lead to distrust. But while the average cost of a corporate data breach increased to $3.5 million in 2015, only 38 percent of global organizations say they are prepared to handle a cyberattack.

Choosing a robust file encryption solution will save you money in the long run, especially as the threat of corporate data breaches has been rising year over year. Xpert Technologies has spent years recruiting the highest caliber IT experts. With Xpert Technologies, you can rest assured that you have the latest and greatest in file security, for everything from mobile devices to network infrastructure.

When your data is impossible to decode and safely transmitted, you no longer have to worry about the catastrophic effects of your information in the wrong hands. Things like ransomware become far less threatening, and your company data is far less likely to be targeted by data thieves because encrypted data has no value to them as a hostage. If you protect your corporate network infrastructure with physical security, anti-virus measures, firewalls and other barriers designed to protect your company from data loss, it simply makes sense to add file encryption to your stable of security measures. With Xpert Technologies, the extra protection is easy and affordable.

"... UP TO 200 BILLION IOT DEVICES WILL
NEED SECURING BY 2020 ... "

Choosing File Encryption Solutions

Secure file encryption is a very important part of healthy business practices. While it is a good idea to develop a strong security policy, the technology used for file encryption is also important. Xpert Technologies stays on the cutting edge of security so we can outmatch any threat.
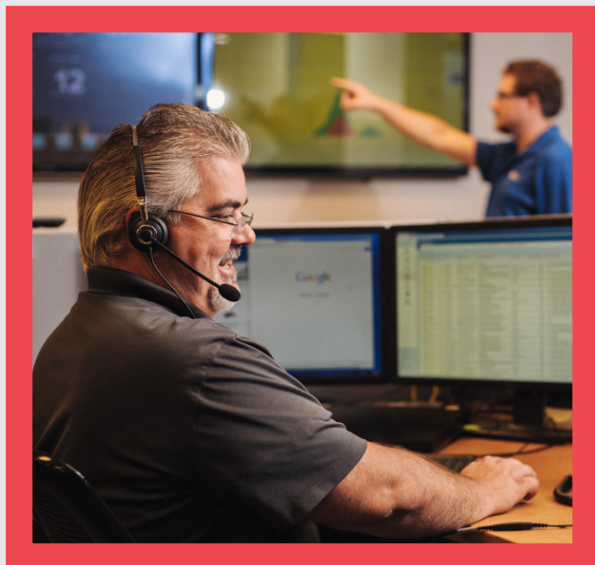

Security is not just about the computers and technology at your physical location. Encryption can and should include mobile devices. As companies grow to include 'bring your own device' policies, and internet of things (IoT) devices, file encryption must expand as well.

According to Intel, up to 200 billion IoT devices will need securing by 2020, showing just how important it is to choose a file encryption solution that can meet the changing demands of modern business technologies. When your employees are on the road or working from home, it is important that they have the same file encryption and security measures as they would if they were in the office.

xEncrypt covers all of your devices, no matter where you are.

Working with Xpert Technologies

We understand that your information is important to you and your clients, and we protect it as if it were our own. You can

outsource all of your file encryption and other security needs to us, safe in the knowledge that it will be handled with the utmost care because our reputation and, therefore, our entire business, depends on it staying safe.

[Our process involves our clients every step of the way](#), ensuring that our file encryption services are perfectly designed for your needs. [Our clients are happy with our services](#) and have had their IT infrastructure positively impacted by our expertise. Their security is our success. For a complete overview of what we offer, including our file encryption services, [our brochure is a great resource.](#)

Xpert Technologies understands how critical file encryption is to the present and future growth of your company. We will never cut corners on this important aspect of IT. If you want the best security on the market, connect with us today.
