

SIMPLIFYING TECH
FOR BUSINESSES SINCE 1998

CASE STUDY

FUTURE FENCE COMPANY

Xpert
TECHNOLOGIES

WWW.XPERT.COM

CHALLENGES:

- Limited server space
- Downtime due to poor tech support
- Keeping up with software and license updates

SERVICES DELIVERED:

- xComplete
- xBackup
- xPhone
- xConnect

THE PROCESS:

Future Fence Company is a company based in Warren, Michigan that specializes in the design and installation of fencing, ranging in style and quality from chain link to decorative solid walls.

After working with Xpert Technologies, Future Fence Company made the decision to upgrade their infrastructure to better suit their storage and connectivity needs. In addition, they decided to take steps towards unifying their communications and backing up their data with additional layers of redundancy.

THE RESULT:

Xpert learned the ins and outs of Future Fence Company's business and designed a budget-friendly solution with all of their pain points in mind. After the end of the project, Future Fence Company smoothed out their workflows, eliminated downtime and distractions, and experienced increased storage capability and connectivity. Ongoing support has helped them leverage their new IT solutions as effectively as possible.

Thanks to their ongoing partnership with Xpert, Future Fence Company has access to technology that gives them a distinct competitive advantage in their market.

“The impact that Xpert Technologies has made has definitely allowed us to keep people more focused on their specific tasks; having our engineers, our estimators, our salesmen really be able to focus on the items that they’re responsible for instead of having to figure out those tech nuances.

It helps us become a better company, and I think a lot of that has to do with being a partner of Xpert and having them take on the duties and roles of much more than just simple, day-to-day tasks.”
